

COMPUTER SCIENCE AND ENGINEERING

R2024

**CURRICULUM
&
SYLLABI**

**GRT INSTITUTE OF
ENGINEERING AND
TECHNOLOGY, Tiruttani**
(An Autonomous Institution)

Accredited by NBA (ECE), NAAC with "A++" Grade & An ISO 9001:2015 Certified Institution
Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai.

B.E. COMPUTER SCIENCE AND ENGINEERING
CURRICULUM REGULATIONS - 2024
CHOICE BASED CREDIT SYSTEM
CURRICULUM AND SYLLABI (SEMESTER I TO VIII)
(FOR THE STUDENTS ADMITTED DURING 2024)

SEMESTER - I									
S.NO	COURSE CODE	COURSE TITLE	CATEGORY	PERIODS PER WEEK			TOTAL CONTACT PERIODS	CREDITS	EXT / INT
				L	T	P			
1	IP24101	Induction Programme	-	-	-	-	-	0	-
THEORY COURSES

SEMESTER-I
Common To All Branches
(B. Tech – AI&DS, IT, B.E – BME, CSE, ECE, EEE & MECH)

HS24101	PROFESSIONAL ENGLISH	L 3	T 0	P 0	C 3
----------------	-----------------------------	----------------------	----------------------	----------------------	----------------------

COURSE OBJECTIVES:

- Improve the communicative competence of learners.
- Help learners use language effectively in academic /work contexts.
- Build on students' English language skills by engaging them in listening, speaking and grammar learning activities that are relevant to authentic contexts.
- Develop learners' ability to read and write complex texts, summaries, articles, blogs, definitions, essays and user manuals.
- Use language efficiently in expressing their opinions via various media

UNIT I INTRODUCTION OF EFFECTIVE COMMUNICATION 1

What is effective communication? (Explain using activities) Why is communication critical for excellence during study, research and work? What are the seven C's of effective communication? What are key language skills? What is effective listening? What does it involve? What is effective speaking? What does it mean to be an excellent reader? What should you be able to do? What is effective writing? How does one develop language and communication skills? What does the course focus on? How are communication and language skills going to be enhanced during this course? What do you as a learner need to do to enhance your English language and communication skills to get the best out of this course?

INTRODUCTION TO FUNDAMENTALS OF COMMUNICATION 8

Reading - Reading brochures (technical context), telephone messages / social media messages relevant to technical contexts and emails. **Writing** - Writing emails / letters introducing oneself. **Grammar** - Present Tense (simple and progressive); Question types: Why/ Yes or No/ and Tags. **Vocabulary** - Synonyms; One word substitution; Abbreviations & Acronyms (as used in technical contexts).

UNIT II NARRATION AND SUMMATION 9

Reading-Reading biographies, travelogues, newspaper reports, Excerpts from literature, and travel & technical blogs. **Writing** - Guided writing-- Paragraph writing Short Report on an event (field trip etc.) **Grammar**-Past tense(simple); Subject Verb Agreement; and Prepositions. **Vocabulary**-Word forms (prefixes& suffixes); Synonyms and Antonyms. Phrasal verbs

UNIT III DESCRIPTION OF PROCESS AND PRODUCT 9

Reading – Reading advertisements, gadget reviews; user manuals. **Writing** - Writing definitions; instructions; and Product /Process description. **Grammar** - Imperatives; Adjectives; Degrees of comparison; Present & Past Perfect Tenses. **Vocabulary** - Compound Nouns, Homonyms; and Homophones, discourse markers (connectives & sequence words).

UNIT IV CLASSIFICATION**9**

Reading–Newspaper articles; Journal reports–and Non-Verbal Communication (tables, pie charts etc.,). Writing–Note-making/Note-taking (*Study skills to be taught, not tested); Writing recommendations; Transferring information from nonverbal (chart , graph etc., to verbal mode) Grammar–Forms of Verbs, Articles; Pronouns- Possessive & Relative pronouns. Vocabulary-Collocations; Fixed/Semi fixed expressions.

UNIT V EXPRESSION OF VIEWS**9**

Reading–Reading editorials; and Opinion Blogs; Writing–Minutes of Meeting, Essay Writing (Descriptive or narrative). Grammar – Future Tenses, Punctuation; Negation (Statements & Questions); and Simple, Compound & Complex Sentences. Vocabulary-Cause & Effect Expressions–Content vs Function words.

Total: 45 Periods**COURSE OUTCOMES:**

After completion of this course, the students should be able to

CO1:Use appropriate words in a professional context.

CO2:Gain understanding of basic grammatical structures and use them in right context.

CO3:Read and interpret and also infer information presented in tables, charts, denotative and connotative meanings of technical texts and other graphic forms.

CO4:Write definitions, descriptions, narrations and essays on various topics.

TEXTBOOKS:

1. English for Engineers & Technologists Orient Black Swan Private Ltd. Department of English, Anna University, (2020 edition)
2. English for Science & Technology CambridgeUniversityPress,2021. Authored by Dr. Veena Selvam, Dr. Sujatha Priyadarshini, Dr. Deepa Mary Francis, Dr. K N. Shoba, and Dr. Lourdes Joevani Department of English, Anna University.

REFERENCEBOOKS:

1. Technical Communication– Principles and Practices By Meenakshi Raman & Sangeeta Sharma, Oxford Univ. Press, 2016, New Delhi.
2. A Course Book on Technical English By Lakshminarayanan, Scitech Publications (India) Pvt. Ltd.
3. English for Technical Communication (With CD) By Aysha Viswa Mohan, McGraw Hill Education, ISBN: 0070264244.
4. Effective Communication Skill, Kulbhusan Kumar, RS Salaria, Khanna Publishing House.
5. Learning to Communicate–Dr. V. Chellammal, Allied Publishing House, New Delhi,2003.

1 - Low, 2 - Medium, 3 - High

COURSE OUTCOMES:

After completion of this course, the students should be able to

CO1:Demonstrate the matrix techniques in solving the related problems in engineering and technology.

CO2:Apply differential calculus tool to solve engineering applications.

CO3:Use differential calculus ideas on functions several variables.

CO4:Evaluate the area and volume by applying the concept of multiple integration.

CO5:Utilize the concept of vector calculus in evaluating integrals.

Common To All Branches
B. Tech – AI&DS, IT, B.E – BME, CSE, ECE, EEE & MECH

PH24101	ENGINEERING PHYSICS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To make the students achieve an understanding of mechanics.
- To enable the students to gain knowledge of electromagnetic waves and its applications.
- To introduce the basics of oscillations, optics and lasers.
- Equipping the students to successfully understand the importance of quantum physics.
- To motivate the students towards the applications of quantum mechanics.

UNIT I MECHANICS

9

Multi-particle dynamics: Center of mass (CM) – CM of continuous bodies – motion of the CM – kinetic energy of the system of particles. Rotation of rigid bodies: Rotational kinematics – rotational kinetic energy and moment of inertia - theorems of M. I – moment of inertia continuous bodies – M.I of a diatomic molecule-rotational energy state of a rigid diatomic molecule - torque – rotational dynamics of rigid bodies – conservation of angular momentum - gyroscope - torsional pendulum.

UNIT II ELECTROMAGNETIC WAVES

9

The Maxwell's equations - wave equation; Plane electromagnetic waves in vacuum, - properties of electromagnetic waves: speed, amplitude, phase, orientation and waves in matter - Source of electromagnetic waves. EM waves: Energy, momentum, intensity and radiation pressure - Cell-phone reception. Reflection and transmission of electromagnetic waves from a non-conducting medium vacuum interface for normal incidence.

UNIT III OSCILLATIONS, OPTICS AND LASERS

9

Simple harmonic motion – resonance –analogy between electrical and mechanical oscillating systems – waves on a string – standing waves – traveling waves – Energy transfer of a wave – sound waves – Doppler effect. Reflection and refraction of light waves – total internal reflection – interference –Michelson interferometer – Theory of air wedge and experiment. Theory of laser – characteristics – Spontaneous and stimulated emission – Einstein's coefficients – population inversion – Nd-YAG laser, CO2 laser, semiconductor laser –Basic applications of lasers in industry.

UNIT IV BASIC QUANTUM MECHANICS

9

Photons and light waves – Electrons and matter waves –Compton effect – Schrodinger equation (Time dependent and time independent forms) – Physical meaning of wave function – particle in a infinite one dimensional (1D) potential well - Normalization, probabilities and the correspondence principle.

UNIT V APPLIED QUANTUM MECHANICS

9

The harmonic oscillator (qualitative)- Barrier penetration and quantum tunneling(qualitative)- Tunneling microscope – Resonant diode – Finite potential wells (qualitative)- Bloch's theorem for particles in a periodic potential –Basics of Kronig-Penney model and origin of energy bands.

COURSE OUTCOMES:

After completion of this course, the students should be able to

CO1: Recognized the importance of mechanics.

CO2: Express their knowledge in electromagnetic waves.

CO3: Demonstrate a strong foundational knowledge in oscillations, optics and lasers.

CO4: Illustrate the importance of quantum physics.

CO5: Comprehend and apply quantum mechanical principles towards the formation of energy bands.

CY24101	ENGINEERING CHEMISTRY	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To inculcate sound understanding of water quality parameters and water treatment techniques.
- To impart knowledge on the basic principles and preparatory methods of nanomaterials.
- To introduce the basic concepts and applications of phase rule and composites.
- To facilitate the understanding of different types of fuels, their preparation, properties and combustion characteristics.
- To familiarize the students with the operating principles, working processes and applications of energy conversion and storage devices.

UNIT I WATER AND ITS TREATMENT 9

Water: Sources and impurities, Water quality parameters: Definition and significance of-color, odour, turbidity, pH, hardness, alkalinity, TDS, COD and BOD, fluoride and arsenic. Municipal water treatment: primary treatment and disinfection (UV, Ozonation, break-point chlorination). Desalination of brackish water: Reverse Osmosis. Boiler troubles: Scale and sludge, Boiler corrosion, Caustic embrittlement, Priming & foaming. Treatment of boiler feed water: Internal treatment (phosphate, colloidal, sodium aluminate and Calgon conditioning) and External treatment – Ion exchange demineralization and zeolite process.

UNIT II NANO CHEMISTRY 9

Basics: Distinction between molecules, non-materials and bulk materials; Size-dependent properties (optical, electrical, mechanical and magnetic); Types of non-material's: Definition, properties and uses of – nanoparticle, nanocluster, nanorod, nanowire and nanotube. Preparation of nanomaterials: sol-gel, solvothermal, laser ablation, chemical vapor deposition, electrochemical deposition and electro spinning. Applications of nanomaterials in medicine, agriculture, energy, electronics and catalysis.

UNIT III PHASE RULE AND COMPOSITES 9

Phase rule: Introduction, definition of terms with examples. One component system - water system; Reduced phase rule; Construction of a simple eutectic phase diagram - Thermal analysis; Two component system: lead-silver system - Pattinson process. Composites: Introduction: Definition & Need for composites; Constitution: Matrix materials (Polymer matrix, metal matrix and ceramic matrix) and Reinforcement (fiber, particulates, flakes and whiskers). Properties and applications of: Metal matrix composites (MMC), Ceramic matrix composites and Polymer matrix composites. Hybrid composites - definition and examples.

UNIT IV FUELS AND COMBUSTION 9

Fuels: Introduction: Classification of fuels; Coal and coke: Analysis of coal (proximate and ultimate), Carbonization, Manufacture of metallurgical coke (Otto Hoffmann method). Petroleum and Diesel: Manufacture of synthetic petrol (Bergius process), Knocking - octane number, diesel oil – cetane number; Power alcohol and biodiesel. - natural gas- compressed natural gas (CNG)- liquefied petroleum gases(LPG).

Combustion of fuels: Introduction: Calorific value - higher and lower calorific values, Theoretical calculation of calorific value; Ignition temperature: spontaneous ignition temperature, Explosive range; Flue gas analysis - ORSAT Method. CO₂ emission and carbon footprint.

UNIT V ENERGY SOURCES AND STORAGE DEVICES

9

Stability of nucleus: mass defect (problems), binding energy; Nuclear energy: light water nuclear power plant, breeder reactor- environmental consequences of fossil fuel- Importance of renewable energy sources -Solar energy conversion: Principle, working and applications of solar cells; Recent developments in solar cell materials. Batteries: Types of batteries- lead acid battery- Solid Battery – Lithium Battery, Lithium-ion; Battery Electric vehicles-working principles; Fuel cells: H₂-O₂ fuel cell, microbial fuel cell.

Total: 45 Periods

COURSE OUTCOMES:

After completion of this course, the students should be able to

CO1:Infer the quality of water from quality parameter data and propose suitable treatment methodologies to treat water.

CO2:Identify and apply basic concepts of nanoscience and nanotechnology in designing the synthesis of nonmaterial for engineering and technology applications.

CO3:Apply the knowledge of phase rule and composites for material selection.

CO4:Analyze the quality of fuel and its various uses.

CO5:Recognize different forms of energy resources and apply them for suitable applications in energy sectors.

TA24101	HERITAGE OF TAMILS	L	T	P	C
		1	0	0	1

UNIT I LANGUAGE AND LITERATURE 3

Language Families in India - Dravidian Languages – Tamil as a Classical Language - Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.

UNIT II HERITAGE - ROCK ART PAINTINGS TO MODERN ART – SCULPTURE 3

Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils.

UNIT III FOLK AND MARTIAL ARTS 3

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Silambattam, Valari, Tiger dance - Sports and Games of Tamils.

UNIT IV THINAI CONCEPT OF TAMILS 3

Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils - Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas.

UNIT V CONTRIBUTION OF TAMILS TO INDIAN NATIONAL MOVEMENT AND INDIAN CULTURE 3

Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India – Self-Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.

Total: 15 Periods

TEXT-CUM-REFERENCE BOOKS

B. Tech – AI&DS, IT, B.E – BME, CSE, ECE, EEE & MECH

GE24102	PROBLEM SOLVING AND PYTHON PROGRAMMING LABORATORY	L	T	P	C
		0	0	4	2

COURSE OBJECTIVES:

- To understand the problem-solving approaches.
- To learn the basic programming constructs in Python.
- To practice various computing strategies for Python-based solutions to real world problems.
- To use Python data structures - lists, tuples, dictionaries.
- To do input/output with files in Python.

LIST OF EXPERIMENTS

1. Identification and solving of simple real life or scientific or technical problems, and developing flow charts for the same. (Electricity Billing, Retail shop billing, Sin series, weight of a motorbike, Weight of a steel bar, compute Electrical Current in Three Phase AC Circuit, etc.)
2. Python programming using simple statements and expressions (exchange the values of two variables, circulate the values of n variables, distance between two points).
3. Scientific problems using Conditionals and Iterative loops. (Number series, Number Patterns, pyramid pattern)
4. Implementing real-time/technical applications using Lists, Tuples. (Items present in a library/Components of a car/ Materials required for construction of a building –operations of list & tuples)
5. Implementing real-time/technical applications using Sets, Dictionaries. (Language, components of an automobile, Elements of a civil structure, etc.- operations of Sets & Dictionaries)
6. Implementing programs using Functions. (Factorial, largest number in a list, area of shape)
7. Implementing programs using Strings. (Reverse, palindrome, character count, replacing characters)
8. Implementing programs using written modules and Python Standard Libraries (pandas, numpy, Matplotlib, scipy)
9. Implementing real-time/technical applications using File handling. (Copy from one file to another, word count, longest word)
10. Implementing real-time/technical applications using Exception handling. (Divide by zero error, voter's age validity, student mark range validation)
11. Exploring Pygame tool.
12. Developing a game activity using Pygame like bouncing ball, car race etc.

Total: 60 Periods

COURSE OUTCOMES:

On completion of the course, students will be able to:

CO1 : Develop algorithmic solutions to simple computational problems

CO2 : Develop and execute simple Python programs.

CO3 : Implement programs in Python using conditionals and loops for solving problems.

CO4 : Process compound data using Python data structures.

CO5 : Utilize Python packages in developing software applications.

PC24101	PHYSICS AND CHEMISTRY LABORATORY	L	T	P	C
		0	0	4	2

PHYSICS LABORATORY

COURSE OBJECTIVES:

- To learn the proper use of various kinds of physics laboratory equipment
- To learn how data can be collected, presented and interpreted in a clear and concise manner.
- To learn problem solving skills related to physics principles and interpretation of experimental data.
- To determine error in experimental measurements and techniques used to minimize such error.
- To make the student as an active participant in each part of all lab exercises.

EXPERIMENT TOPICS: (Any seven experiments to be conducted)

1. Torsional pendulum - Determination of rigidity modulus of wire and moment of inertia of regular and irregular objects.
2. Simple harmonic oscillations of cantilever.
3. Non-uniform bending - Determination of Young's modulus
4. Uniform bending – Determination of Young's modulus
5. Laser- Determination of the wave length of the laser using grating
6. Air wedge - Determination of thickness of a thin sheet/wire
7. a) Optical fibre -Determination of Numerical Aperture and acceptance angle
b) Compact disc- Determination of width of the groove using laser.
8. Acoustic grating- Determination of velocity of ultrasonic waves in liquids.
9. Ultrasonic interferometer – determination of the velocity of sound and compressibility of liquids
10. Post office box -Determination of Band gap of a semiconductor.
11. Photoelectric effect
13. Michelson Interferometer.
14. Melde's string experiment
15. Experiment with lattice dynamics kit.

CHEMISTRY LABORATORY

COURSE OBJECTIVES:

- To inculcate experimental skills to test basic understanding of water quality parameters, such as, acidity, alkalinity, hardness, DO, chloride and copper.
- To induce the students to familiarize with electro analytical techniques such as, pH metry, potentiometry and conductometry in the determination of impurities in aqueous solutions.
- To demonstrate the analysis of metals and alloys.
- To demonstrate the synthesis of nanoparticles.

EXPERIMENT TOPICS: (Any seven experiments to be conducted)

1. Preparation of Na_2CO_3 as a primary standard and estimation of acidity of a water sample using the primary standard
2. Determination of types and amount of alkalinity in water sample. Split the first experiment into two
3. Determination of total, temporary & permanent hardness of water by EDTA method.
4. Determination of DO content of water sample by Winkler's method.
5. Determination of chloride content of water sample by Argentometric method.
6. Estimation of copper content of the given solution by Iodometry.
7. Estimation of TDS of a water sample by gravimetry.
8. Determination of strength of given hydrochloric acid using pH meter.
9. Determination of strength of acids in a mixture of acids using conductivity meter.
10. Conductometric titration of barium chloride against sodium sulphate (precipitation titration)
11. Estimation of iron content of the given solution using potentiometer.
12. Estimation of sodium /potassium present in water using flame photometer.
13. Preparation of nanoparticles ($\text{TiO}_2/\text{ZnO}/\text{CuO}$) by Sol-Gel method.
14. Estimation of Nickel in steel
15. Proximate analysis of Coal

COURSE OUTCOMES:

Upon completion of the course, the students should be able to

CO1 : Analysis the Modulus of elasticity of materials.

CO2 : Illustrate the Laser and Optical fiber.

CO3 : Determine the wavelength of Ultrasonic wave in Liquid.

CO4 : Analyze the effect of chloride in water and DO present in sample water.

CO5 : Identify basicity acidity and pH of the materials

TEXT BOOKS:

1. J. Mendham, R. C. Denney, J.D. Barnes, M. Thomas and B. Sivasankar, Vogel's, Textbook of Quantitative Chemical Analysis (2009).

HS24102	ENGLISH LABORATORY	L	T	P	C
		0	0	2	1

COURSE OBJECTIVES:

- To improve the communicative competence of learners
- To help learners use language effectively in academic/work contexts
- To develop various listening strategies to comprehend various types of audio materials like lectures, discussions, videos etc.
- To build on students' English languages skills by engaging the listening, speaking and grammar learning activities that is relevant to authentic contexts.
- To use language efficiently in expressing their opinions via various media.

UNIT I INTRODUCTION TO FUNDAMENTALS OF COMMUNICATION 6

Listening for general information-specific details- conversation: Introduction to classmates - Audio / video (formal & informal); Telephone conversation; Listening to voicemail & messages; Listening and filling a form. Speaking - making telephone calls-Self Introduction; Introducing a friend; - politeness strategies- making polite requests, making polite offers, replying to polite requests and offers- understanding basic instructions (filling out a bank application for example).

UNIT II NARRATION AND SUMMATION 6

Listening - Listening to podcasts, anecdotes / stories / event narration; documentaries and interviews with celebrities. Speaking - Narrating personal experiences / events-Talking about current and temporary situations & permanent and regular situations* - describing experiences and feelings- engaging in small talk- describing requirements and abilities.

UNIT III DESCRIPTION OF PROCESS/ PRODUCT 6

Listening - Listen to product and process descriptions; a classroom lecture; and advertisements about products. Speaking – Picture description- describing locations in workplaces- Giving instruction to use the product-explaining uses and purposes- Presenting a product- describing shapes and sizes and weights- talking about quantities (large & small)-talking about precautions.

UNIT IV CLASSIFICATION AND RECOMMENDATIONS 6

Listening – Listening to TED Talks; Listening to lectures - and educational videos. Speaking – Small Talk; discussing and making plans-talking about tasks-talking about progress- talking about positions and directions of movement-talking about travel preparations- talking about transportation-

UNIT V DISCUSSION 6

Listening –Listening to debates/discussions; different viewpoints on an issue; and panel discussions. Speaking –making predictions- talking about a given topic-giving opinions- understanding a website- describing processes

Total: 30 Periods

COURSE OUTCOMES:

At the end of the course, learners will be able

CO1 : To listen and comprehend complex academic texts

CO2 : To speak fluently and accurately in formal and informal communicative contexts

CO3 : To express their opinions effectively in both oral and written medium of communication

Assessment Pattern

- Conduction of Assessment to test speaking and writing skills

CO-PO MAPPING

(B. Tech – AI&DS, IT, B.E – BME, CSE, ECE, EEE & MECH)

MA24201	STATISTICS AND NUMERICAL TECHNIQUES	L	T	P	C
		3	1	0	4

COURSE OBJECTIVES:

The student should be made to:

- This course aims at providing the necessary basic concepts of a few statistical and numerical methods and give procedures for solving numerically different kinds of problems occurring in engineering and technology.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
- To introduce the basic concepts of solving algebraic and transcendental equations.
- To introduce the numerical techniques of interpolation in various intervals and numerical techniques of differentiation and integration which plays an important role in engineering and technology disciplines.
- To acquaint the knowledge of various techniques and methods of solving ordinary differential equations.

UNIT I	TESTING OF HYPOTHESIS	9+3
---------------	------------------------------	------------

Sampling distributions - Tests for single mean, proportion and difference of means (Large and small samples)
– Tests for single variance and equality of variances – Chi square test for goodness of fit – Independence of attributes.

UNIT II	DESIGN OF EXPERIMENTS	9+3
----------------	------------------------------	------------

One way and two - way classifications - Completely randomized design – Randomized block design – Latin square design - 2^2 factorial design.

UNIT III	SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS	9+3
-----------------	--	------------

Solution of algebraic and transcendental equations - Fixed point iteration method – Newton Raphson method-
Solution of linear system of equations - Gauss elimination method – Pivoting - Gauss Jordan method – Iterative
methods of Gauss Jacobi and Gauss Seidel - Eigenvalues of a matrix by Power method and Jacobi’s method
for symmetric matrices.

[illegible]

Lagrange's and Newton's divided difference interpolations – Newton's forward and backward difference interpolation – Approximation of derivatives using interpolation polynomials – Numerical single and double integrations using Trapezoidal and Simpson's 1/3 rules.

UNIT V NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATION 9+3

Single step methods: Taylor's series method - Euler's method - Modified Euler's method - Fourth order Runge-Kutta method for solving first order differential equations - Multi step methods: Milne's and Adams - Bash forth predictor corrector methods for solving first order differential equations.

Total: 60 Periods

COURSE OUTCOMES

At the end of the course, the students should be able to

CO1 : Apply the concept of testing of hypothesis for small and large samples in real life problems.

CO2 : Apply the basic concepts of classifications of design of experiments in the field of agriculture.

CO3 : Appreciate the numerical techniques of interpolation in various intervals and apply the numerical techniques of differentiation and integration for engineering problems.

CO4 : Understand the knowledge of various techniques and methods for solving first and second order ordinary differential equations.

CO5 : Solve the partial and ordinary differential equations with initial and boundary condition by using certain techniques with engineering applications.

SEMESTER-II
Common To All Branches
B. Tech – AI&DS, IT, B.E – BME, CSE, ECE, EEE & MECH

GE24201	ENGINEERING GRAPHICS	L	T	P	C
		2	0	3	4

COURSE OBJECTIVES:

- To understand the importance of the drawing in engineering applications.
- To develop graphic skills for communication of concepts, ideas and design of engineering products.
- To expose them to existing national standards related to technical drawings.
- To improve their visualization skills so that they can apply this skill in developing new products.
- To improve their technical communication skill in the form of communicative drawings.

UNIT-I PLANE CURVES AND PROJECTION OF POINTS 5+9

Importance of graphics in engineering applications–Use of drafting instruments– BIS conventions and specifications–size, layout and folding of drawing sheets– lettering and dimensioning. (Not for examination)
 Curves used in engineering practices: Conics–construction of ellipse, parabola and hyperbola by eccentricity method, cycloidal curves–construction of cycloid, construction of involutes of square and circle–drawing of tangents and normal to the above curves. Orthographic projection – principles – principal planes – first angle projection – projection of points.

UNIT-II PROJECTION OF LINES AND PLANE SURFACES 5+9

Projection of straight lines (only first angle projection) inclined to both the principal planes – determination of true lengths and true inclinations by rotating line method and traces.
 Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

UNIT-III PROJECTION OF SOLIDS AND SECTION OF SOLIDS 5+9

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one of the principal planes by rotating object method.
 Sectioning of solids in simple position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section.

UNIT-IV DEVELOPMENT OF SURFACE AND ISOMETRIC PROJECTIONS 5+9

Development of lateral surfaces of simple and sectioned solids – prisms, pyramids cylinders and cones. Principles of isometric projection – isometric scale –isometric projections of simple solids and truncated solids –prisms, pyramids, cylinders, cones and combination of two solid objects in simple vertical positions.

UNIT-V FREE HAND SKETCHING AND PERSPECTIVE PROJECTIONS 5+9

Visualization concepts–representation of three dimensional objects – layout of views–freehand sketching of multiple views from pictorial views of objects.
 Principle of perspective projection – terminology –perspective projection of simple solids-prisms, pyramids, cylinder and cone by visual ray method.

UNIT-VI**COMPUTER AIDED DRAFTING (Not for examination)****5**

Introduction to drafting packages: Initial Setup Commands, Coordinate system in AutoCAD, UCS, WCS, and MCS. Draw Commands, Modify Commands, View Commands, Annotation commands, 2D Drawings and 3D Models -Simple Exercises.

Total: 75 Periods**COURSE OUTCOMES**

On successful completion of this course, the student will be able

CO1 : To construct different plane curves and to comprehend the theory of projection.

CO2 : To project orthographic projections of lines and plane surfaces.

CO3 : To draw the projection of simple solids and sectional solids.

CO4 : To draw the development of lateral surfaces of sectional solids and Isometric projections of solids.

CO5 : To perform freehand sketching of multiple views from pictorial view and visualize perspective view of simple solids.

SEMESTER-II
B. Tech-AI&DS, IT, B.E.-CSE

PH24201	PHYSICS FOR INFORMATION SCIENCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the concepts of classical and quantum electron theories and energy band structures
- To enable the students to learn the basics of semiconductor physics and its applications in various devices.
- To establish the properties of magnetic materials and their applications in data storage.
- To understand the functioning of optical materials for optoelectronics
- To instill the basics of quantum structures and their applications in nano electronics.

UNIT I	ELECTRICAL PROPERTIES OF MATERIALS	9
---------------	---	----------

Classical free electron theory -Expressions for electrical conductivity and thermal conductivity - Wiedemann-Franz law – success and failures – electron in metals – degenerate states – Quantum free electron theory – Fermi-Dirac statistics – Fermi-Dirac distribution function- Effect of temperature – Density of energy states – Electron in periodic potential – Energy bands in solids – Tight binding approximation - Electron effective mass – Concept of hole.

UNIT II SEMICONDUCTOR PHYSICS 9

Intrinsic semiconductors – energy band diagram –direct and indirect band gap semiconductors – Carrier concentration in intrinsic semiconductors – Extrinsic semiconductors - Carrier concentration in n-type & p-type semiconductors – variation of carrier concentration with temperature – variation of Fermi level with temperature and impurity concentration – carrier transport in semiconductor – drift and diffusion transport – Hall effect and devices – Ohmic contacts – Schottky diode.

UNIT III MAGNETIC MATERIALS 9

Magnetic dipole moment – Origin of magnetic moments – Bohr magneton – magnetic permeability and susceptibility - Magnetic material classification: diamagnetism – paramagnetism – ferromagnetism – antiferromagnetism – ferrimagnetism – Ferromagnetism: origin and exchange interaction- saturation magnetization and Curie temperature – Domain Theory – Hysteresis – M versus H behavior hysteresis loop – Hard and soft magnetic materials – examples and uses— Magnetic principle in computer data storage – Magnetic hard disc (GMR sensor).

UNIT IV OPTICAL PROPERTIES OF MATERIALS 9

Classification of optical materials – carrier generation and recombination processes - Absorption emission and scattering of light in metals, insulators and semiconductors (concepts only) – photo current in a P- N diode – solar cell – photo detectors - LED – Organic LED – Optical storage techniques.

UNIT V NANOMATERIALS & NANO DEVICES 9

Introduction - quantum confinement – quantum structures: quantum wells, wires and dots — band gap of nanomaterials. Tunneling – Single electron phenomena: Coulomb blockade - resonant-tunneling diode – single electron transistor – quantum cellular automata - Quantum system for information processing - quantum states

– classical bits – quantum bits or qubits –CNOT gate - multiple qubits – Bloch sphere – quantum gates – advantage of quantum computing over classical computing.

Total: 45 Periods

COURSE OUTCOMES:

At the end of the course, the students should be able to

CO1 : Explain the classical and quantum electron theories, and energy band structures

CO2 : Apply the basics of semiconductor physics in various electronic applications

CO3 : Explore the properties of magnetic materials and their applications in data storage.

CO4 : Illustrate the functioning of optical materials for optoelectronics

CO5 : Utilize the basics of quantum structures and their applications in Nanoelectronics devices.

SEMESTER-II
B. Tech-AI&DS, IT, B.E.-CSE

CS24201	C LANGUAGE PROGRAMMING	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To understand basics of Unix/Linux and the constructs of C Language.
- To develop C Programs using basic programming constructs
- To develop C programs using arrays and strings
- To develop modular applications in C using functions
- To develop applications in C using pointers and structures
- To do input/output and file handling in C and Implementation of simple projects using C

UNIT I BASICS OF C PROGRAMMING

9

Introduction to UNIX/LINUX - basic Commands with shell scripting- Introduction to programming paradigms – Applications of C Language - Structure of C program - C programming: Data Types - Constants – Enumeration Constants - Keywords – Operators: Precedence and Associativity - Expressions - Input/Output statements, Assignment statements – Decision making statements - Switch statement - Looping statements – Preprocessor directives -Compilation process

UNIT II ARRAYS AND STRINGS

9

Introduction to Arrays: Declaration, Initialization – One dimensional array –Two dimensional arrays - String operations: length, compare, concatenate, copy – Selection sort, linear and binary search.

UNIT III

9

Modular programming - Function prototype, function definition, function call, Built-in functions (string functions, math functions) – Recursion, Binary Search using recursive functions – Pointers – Pointer operators – Pointer arithmetic – Arrays and pointers – Array of pointers – Parameter passing: Pass by value, Pass by reference.

UNIT IV STRUCTURES AND UNION

9

Structure - Nested structures – Pointer and Structures – Array of structures – Self referential structures – Dynamic memory allocation - Singly linked list – typedef – Union - Storage classes and Visibility.

UNIT V FILE PROCESSING and Implementation

9

Files – Types of file processing: Sequential access, Random access – Sequential access file - Random access file - Command line arguments – Implementation of simple projects using C (Program Design, Program Coding, Program Testing and Debugging).

COURSE OUTCOMES:

Upon completion of the course, the students will be able to

CO1 : Demonstrate basic knowledge on Unix / Linux and C Programming constructs

CO2 : Design and implement applications using arrays and strings

C03 : Develop and implement modular applications in C using functions.

CO4 : Develop applications in C using structures and pointers.

CO5 : Design applications using sequential and random-access file processing and Implementation of simple projects using C

		1	0	0	1

UNIT I WEAVING AND CERAMIC TECHNOLOGY 3

Weaving Industry during Sangam Age – Ceramic technology – Black and Red Ware Potteries (BRW) – Graffiti on Potteries.

UNIT II DESIGN AND CONSTRUCTION TECHNOLOGY 3

Designing and Structural construction House & Designs in household materials during Sangam Age -Building materials and Hero stones of Sangam age – Details of Stage Constructions in Silappathikaram - Sculptures and Temples of Mamallapuram - Great Temples of Cholas and other worship places - Temples of Nayaka Period - Type study (Madurai Meenakshi Temple)- Thirumalai Nayakar Mahal - Chetti Nadu Houses, Indo - Saracenic architecture at Madras during British Period.

UNIT III MANUFACTURING TECHNOLOGY 3

Art of Ship Building - Metallurgical studies - Iron industry - Iron smelting, steel -Copper and gold-Coins as source of history - Minting of Coins – Beads making-industries Stone beads -Glass beads -Terracotta beads - Shell beads/ bone beats - Archeological evidences - Gem stone types described in Silappathikaram.

UNIT IV AGRICULTURE AND IRRIGATION TECHNOLOGY 3

Dam, Tank, ponds, Sluice, Significance of Kumizhi Thoompu of Chola Period, Animal Husbandry -Wells designed for cattle use - Agriculture and Agro Processing - Knowledge of Sea - Fisheries –Pearl - Conche diving - Ancient Knowledge of Ocean - Knowledge Specific Society.

UNIT V SCIENTIFIC TAMIL & TAMIL COMPUTING 3

Development of Scientific Tamil - Tamil computing – Digitalization of Tamil Books – Development of Tamil Software – Tamil Virtual Academy – Tamil Digital Library – Online Tamil Dictionaries –Sorkuvai Project.

SEMESTER-II
Common To B. Tech – AI&DS, IT, B.E – BME, CSE, & MECH

EE24203	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING	L	T	P	C
		3	0	2	4

COURSE OBJECTIVES:

- To illustrate the basics of electric circuits and analysis of DC & AC circuits.
- To understand the knowledge in the basics of working principles and application of electrical machines.
- To evaluate the fundamentals of analog electronics and their characteristics.
- To demonstrate the fundamental concepts of digital electronics.
- To compute the functional elements and working of measuring instruments.

UNIT - I BASIC ELECTRIC CIRCUITS 9

DC Circuits: Basic Circuit elements – Ohm’s Law - Kirchhoff’s Laws with Independent Sources – Resistors in Series and Parallel- Current division and Voltage division- Nodal Analysis, Mesh analysis with Independent sources only - Thevenin’s and Norton’s Theorem. Introduction to AC circuit Fundamentals: Waveforms, Average value, RMS Value, Instantaneous power, real power, reactive power and apparent power, power factor.

UNIT II ELECTRICAL MACHINES 9

Construction and Working principle - DC Machines, EMF equation, Types and Applications. Construction and Working Principle of Transformers & Induction Motors, V/F drives.

UNIT III ANALOG ELECTRONICS 9

PN Junction Diode, Zener Diode – V-I Characteristics & Applications, BJT, SCR, MOSFET, IGBT Types– Basics of Rectifier and Inverter.

UNIT IV DIGITAL ELECTRONICS 9

Number system and its conversion, binary codes, Combinational logic - representation of logic functions-SOP and POS forms, K-map representations - minimization using K maps.

UNIT V MEASUREMENTS AND INSTRUMENTATION 9

Functional elements of an instrument, Standards, Operating Principle, types -Moving Coil and Moving Iron meters, Measurement of three phase power, Energy Meter, Instrument Transformers - CT and PT, DSO – Block diagram – Data Acquisition.

Total: 45 Periods

LIST OF EXPERIMENTS:

1. Simulation and experimental verification of electrical circuit using Mesh analysis.
2. Simulation and experimental verification of electrical circuit using Nodal analysis.
3. Measurement of Three Phase Power using two Wattmeter method.
4. Load test on single-phase transformer.
5. Load test on DC shunt motor.
6. VI characteristic of PN junction diode.

7. VI characteristic of Zener Diode.
8. Study of solar PV.

Total: 30 Periods

Total: 75 Periods

COURSE OUTCOMES

After completing this course, the students will be able to

CO1 : Compute the electric circuit parameters.

CO2 : Illustrate the working principle and applications of electrical machines.

CO3 : Plot the characteristics of analog electronics.

CO4 : Summarize the basic concepts of digital electronics.

CO5 : Interpret the operating principles of measuring instruments.

GE24201	ENGINEERING PRACTICES LABORATORY	L	T	P	C
		0	0	4	2

COURSE OBJECTIVES:

The main learning objective of this course is to provide hands on training to the students in:

- Drawing pipe line plan; laying and connecting various pipe fittings used in common household plumbing work; Sawing; planning; making joints in wood materials used in common household wood work.
- Welding various joints in steel plates using arc welding; machining various simple processes like turning, drilling, and tapping in parts.
- Wiring various electrical joints in common household electrical wire work.
- Soldering and testing simple electronic circuits; assembling and testing simple electronic components on PCB.

GROUP – A (CIVIL & MECHANICAL ENGINEERING)

PART I **CIVIL ENGINEERING PRACTICES** **15**

PLUMBING WORK:

- a. Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, and elbows in household fittings.
- b. Connecting various basic pipe fittings like valves, taps, coupling, unions, reducers, elbows and other components which are commonly used in household.
- c. Preparation of plumbing line sketches for water supply.
- d. Laying pipe connection to the suction and delivery side of a pump
- e. Mixed pipe material connection – Pipe connections with different joining components.

WOOD WORK:

- a. Study of the joints in roofs, doors, windows and furniture.
- b. Making joints like Mortise and Tenon joint, T-Joint and Dovetail joint by sawing, planning and cutting.

PART II **MECHANICAL ENGINEERING PRACTICES** **15**

WELDING WORK:

- a. Welding of Butt joints, Lap joints and Tee joints using arc welding.
- b. Gas welding practice

BASIC MACHINING WORK:

- a. Simple step turning, taper turning
- b. Simple drilling.

ASSEMBLY WORK:

- a. Study of centrifugal pump
- b. Study of air conditioner
- c. Study of household mixer.

SHEET METAL WORK:

- a. Making models of a square/Rectangular tray and funnels.

FOUNDRY WORK:

- a. Demonstrating basic foundry operations.

GROUP B (ELECTRICAL & ELECTRONICS ENGINEERING)**PART III ELECTRICAL ENGINEERING PRACTICES 15**

- a. Introduction to switches, fuses, indicators and lamps - Basic switch board wiring with lamp, fan and three pin socket.
- b. Staircase Wiring.
- c. Fluorescent Lamp wiring with introduction to CFL and LED types.
- d. Energy meter wiring and related calculations/ calibration.
- e. Study of Iron Box wiring and assembly.
- f. Study of Fan Regulator (Resistor type and Electronic type using Diac/Triac/quadrac).
- g. Study of emergency lamp wiring/Water heater.

PART IV ELECTRONIC ENGINEERING PRACTICES 15**STUDY OF ELECTRONIC COMPONENTS**

- a. Measurement of Resistance of a resistor using Color Coding.
- b. Measurement of AC signal parameters (Peak-Peak, RMS period, Frequency) using CRO.

SOLDERING WORK:

- a. Soldering simple electronic circuits and checking continuity.

ELECTRONIC ASSEMBLY AND TESTING WORK:

- a. Assembling and testing electronic components on a small PCB.

STUDY OF LOGIC GATES:

- a. Verification of logic gates - AND, OR, NOT, NAND, NOR, EXOR, EX-NOR.

ELECTRONIC EQUIPMENT STUDY:

- a. Study on elements of smart phone.
- b. Assembly and dismantle of LED TV.
- c. Assembly and dismantle of computer/ laptop.

Total = 60 Periods

***At end of the semester students should submit the prototypes of their stem projects.**

COURSE OUTCOMES

On successful completion of this course, the student will be able to:

CO1: draw pipe line plan; lay and connect various pipe fittings used in common household plumbing work; Saw; plan; make joints in wood materials used in common household wood work.

CO2: weld various joints in steel plates using arc welding work; Machine various simple processes like turning, drilling, and tapping in parts.

CO3: assemble simple mechanical assembly of common household equipment's; Make a simple model using sheet metal work.

CO4: wiring of various electrical joints in common household electrical wire work.

CO5: solder and test simple electronic circuits; Assemble and test simple electronic components on PCB.

CO6: understand the concept and verification of logic gates.

SEMESTER-II
Common To All Branches
B. Tech – AI&DS, IT, B.E – BME, CSE, ECE, EEE & MECH

CS24202	C LANGUAGE PROGRAMMING LABORATORY	L	T	P	C
		0	0	4	2

COURSE OBJECTIVES:

- To familiarise with basic UNIX/LINUX Commands and C programming constructs.
- To develop programs in C using basic constructs.
- To develop programs in C using arrays.
- To develop applications in C using strings, pointers, functions.
- To develop applications in C using structures.
- To develop applications in C using file processing.

LIST OF EXPERIMENTS:

Note: The lab instructor is expected to design problems based on the topics listed. The Examination shall not be restricted to the sample experiments designed.

1. UNIX/LINUX basic Commands, I/O statements, operators, expressions
2. decision-making constructs: if-else, goto, switch-case, break-continue
3. Loops: for, while, do-while
4. Arrays: 1D and 2D, Multi-dimensional arrays, traversal
5. Strings: operations
6. Functions: call, return, passing parameters by (value, reference), passing arrays to function.
7. Recursion
8. Pointers: Pointers to functions, Arrays, Strings, Pointers to Pointers, Array of Pointers
9. Structures: Nested Structures, Pointers to Structures, Arrays of Structures and Unions.
10. Files: reading and writing, File pointers, file operations, random access, processor directives.

Total: 60 Periods

COURSE OUTCOMES:

Upon completion of the course, the students will be able to

CO1 : Demonstrate knowledge on C programming constructs.

CO2 : Develop programs in C using arrays.

CO3 : Develop applications in C using strings, pointers, functions.

CO4 : Develop applications in C using structures.

CO5 : Develop applications in C using file processing.

Common To All Branches
B. Tech – AI&DS, IT, B.E – BME, CSE, ECE, EEE & MECH

HS24202	ENGLISH COMMUNICATION LABORATORY	L	T	P	C
		0	0	4	2

COURSE OBJECTIVES:

- To identify varied group discussion skills and apply them to take part in effective discussions in a professional context.
- To be able to communicate effectively through writing.

UNIT I SELF INTRODUCTION AND EMAIL DRAFTING 12

Speaking: Role Play Exercises Based on Workplace Contexts, - talking about competition- discussing progress toward goals-talking about experiences-talking about events in life-discussing past events.

Writing: Writing emails (formal & semi-formal).

UNIT II INDIVIDUAL DISCUSSION ON SOCIAL ISSUES 12

Speaking: discussing news stories-talking about frequency-talking about travel problems- discussing travel procedures- talking about travel problems- making arrangements-describing arrangements-discussing plans and decisions- discussing purposes and reasons- understanding common technology terms.

Writing: Writing different types of emails.

UNIT III PRESENTATION ON TECHNICAL AND NON-TECHNICAL TOPICS 12

Speaking: discussing predictions-describing the climate-discussing forecasts and scenarios-talking about purchasing-discussing advantages and disadvantages-making comparisons-discussing likes and dislikes-discussing feelings about experiences-discussing imaginary scenarios.

Writing: Short essays and reports-formal/semi-formal letters.

UNIT IV IMPORTANCE OF DESCRIPTIVE WRITING & INSTRUCTIONS 12

Speaking: discussing the natural environment-describing systems-describing position and movement-explaining rules-(example- discussing rental arrangements)- understanding technical instructions.

Writing: Writing instructions. Writing a short article.

UNIT V GROUP DISCUSSION AND IMPORTANCE OF RESUME WRITING 12

Speaking: describing things relatively-describing clothing-discussing safety issues (making recommendations) talking about electrical devices-describing controlling actions.

Writing: Job application (Cover letter+ Curriculum vitae)- product presentation)

Total: 60 Periods

COURSE OUTCOMES

After completion of this course, the students should be able to

CO1 : Speak effectively in group discussions held in a formal/semi formal contexts.

CO2 : Discuss, analyse and present concepts and problems from various perspectives to arrive at suitable solutions

CO3 : Write emails, letters and effective job applications.

CO4 : Write critical reports to convey data and information with clarity and precision.

CO5 : Give appropriate instructions and recommendations for safe execution of tasks.

Assessment Pattern

- Conduction of Assessment to test speaking and writing skills

SEMESTER-III
(B.E - CSE)

CS24301	DATA STRUCTURES AND ALGORITHMS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

To enable the students to

- Understand the fundamental concepts of data structures, abstract data types (ADTs), and their importance in programming and algorithm design.
- Develop proficiency in implementing linear and nonlinear data structures such as linked lists, stacks, queues, trees, and graphs.
- Explore and apply various sorting and searching algorithms, understanding their efficiency and use-cases.
- Introduce algorithmic techniques such as dynamic programming, greedy algorithms, divide and conquer, and backtracking.
- Analyse computational problems for NP-completeness and explore exact and approximate solutions using backtracking, branch and bound, and randomized algorithms.

UNIT-I INTRODUCTION TO DATA STRUCTURES 9

Linear list – singly linked list implementation, insertion, deletion and searching operations on linear list, circularly linked lists- Operations for Circularly linked lists, doubly linked list implementation, insertion, deletion and searching operations, applications of linked lists.

UNIT-II STACK AND QUEUE ADT 9

Definition, operations, array and linked implementations in C, applications-infix to postfix conversion, Postfix expression evaluation, recursion implementation. Queue ADT- definition and operations, array and linked Implementations in C, Circular queues Insertion and deletion operations, Dequeue (Double ended queue) ADT, array and linked implementations in C

UNIT-III TREE AND HASHING TECHNIQUES 9

Definitions, tree representation, properties of trees, AVL tree, optimal binary search tree, Binary tree, Binary tree representation, tree traversals, Minimum Spanning Tree, applications of trees. linear and binary search methods- selection sort, bubble sort, insertion sort, quick sort, merge sort and radix Sort-Hash Functions-Rehashing

UNIT-IV ALGORITHM DESIGN TECHNIQUES 9

Asymptotic Notations and its properties best case, Worst case and average case analysis – Recurrence relation: substitution method - Pattern search: The naïve string-matching algorithm shortest path: Floyd-Warshall algorithm Network flow: Ford-Fulkerson method – Elements of dynamic programming — Matrix-chain multiplication - Multi stage graph. Greedy Technique: Elements of the greedy strategy — Huffman Trees.

UNIT - V SEARCH ALGORITHM AND NP COMPLETE ALGORITHM 9

Backtracking: n-Queens problem - Hamiltonian Circuit Problem - Subset Sum Problem Branch and Bound: Solving 15-Puzzle problem - Assignment problem - Knapsack Problem - Travelling Salesman Problem - NP-hardness and NP-completeness -Randomized Algorithms: - randomized quick sort

TOTAL PERIODS: 45

TEXT BOOKS:

1. Mark Allen Weiss, Data structures and algorithms analysis in C-2nd edition Pearson Education.
2. A.V. Aho, J.D. Ullman, J.E. Hopcroft, Data Structures and Algorithms, Williams Publishing, 2000.
3. J. Prichard, F.M. Carrano, Data Abstraction and Problem Solving: Walls and Mirrors (3rd Edition), Williams Publishing, 2011.

REFERENCES:

1. DELNET access link open source <http://discovery.delnet.in/>
2. K-hub in e- Library resource link <http://k-hub.in/dashboard>

COURSE OUTCOMES:

On completion of the course, the student will be able to

- CO1:** Describe and use different types of data structures and abstract data types effectively in software development.
- CO2:** Implement linear and nonlinear data structures using C language.
- CO3:** Apply searching and sorting techniques to organize and retrieve data efficiently.
- CO4:** Analyse algorithm efficiency using asymptotic notation and design optimized solutions using dynamic programming and greedy methods.
- CO5:** Design, analyse, and compare the performance of algorithms for real-world Problem- solving.

SEMESTER-III

(B.E - CSE)

CS24302	PROGRAMMING IN JAVA	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

To enable the students to

- Understand the fundamental principles of object-oriented programming and Java features such as platform independence, multithreading, and memory management.
- Develop Java programs using core components including variables, operators, control structures, data types, and class definitions.
- Implement the concepts of classes, inheritance, interfaces, and method polymorphism using Java's object-oriented features.
- Apply exception handling and multithreading concepts to build robust and concurrent applications.
- Create dynamic web-based applications using Java Servlets and JSP, and integrate them with databases using JDBC.
- Utilize Java's I/O system and collection framework for efficient file handling and data manipulation.

UNIT I INTRODUCTION TO JAVA

9

An Overview of Java: Object-Oriented concepts - Java buzzwords (Platform independence, Portability, Threads)- JVM architecture –Java Program structure - Java main method – Data types - Variables - type conversion and casting- Java Console input: Buffered input - operators - control statements - Static Data - Static Method - String and String Buffer Classes

UNIT II CLASSES AND OBJECTS

9

Java user defined Classes and Objects – Arrays – constructors - Inheritance: Basic concepts - Types of inheritance - Member access rules - Usage of this and Super keyword - Method Overloading - Method overriding - Abstract classes - Dynamic method dispatch - Usage of final keyword - Packages: Definition - Access Protection -Importing Packages - Interfaces: Definition – Implementation – Extending Interfaces

UNIT III EXCEPTION HANDLING

9

Try – catch - throw - throws – finally – Built-in exceptions -Creating own Exception classes -
garbage collection, finalize -Multithreaded Programming: Thread Class - Runnable interface –
Synchronization – Using synchronized methods – Using synchronized statement - Interthread
Communication – Deadlock.

UNIT IV JAVA SERVLETS

9

Overview of Web Technologies (Client-Server, HTTP, Web Servers)- Introduction to Java Servlets-

Advanced Servlet Concepts and Session Management-Introduction to JSP-Implicit Objects JSP Tags and -MVC Architecture and JSP-Servlet Integration-JDBC architecture-JDBC Advanced Features-Integrating JDBC with Servlets.

UNIT V File Handling and frameworks

9

Input / Output Basics — Streams — Byte streams and Character streams — Reading and Writing Console — Reading and Writing Files Adapter classes - Inner classes -Java Util Package / Collections framework: Collection & Iterator Interface- Enumeration- List and ArrayList- Vector- Comparator

TOTAL PERIODS: 45

COURSE OUTCOMES:

On completion of the course, the student will be able to

CO1: Understand OOP and basic Java constructs

CO2: Analyze inheritance and abstract class

CO3: Analyze exception handling

CO4: Develop Java web apps with JDBC

CO5: Perform file I/O, multithreading, containers

SEMESTER-III
COMMON TO (AIDS, CSE & IT)

EC24303	COMPUTER ORGANIZATION AND DIGITAL PRINCIPLES	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

The Students should be made to:

- To understand the basic structure and operation of a digital computer.
- To study the design of data path unit, control unit for processor and to familiarize with the hazards.
- To understand the concept of various memories and I/O interfacing.
- To analyze and design combinational circuits.
- To analyze and design sequential circuits.

UNIT I COMBINATIONAL LOGIC

9

Combinational Circuits – Karnaugh Map - Design Procedures- Adder – Subtractor - Code convertors - Magnitude Comparator – Decoder – Encoder – Multiplexers – Demultiplexers.

UNIT II SEQUENTIAL CIRCUITS

9

Introduction to Sequential Circuits – Flip-Flops – operation and excitation tables, Triggering of FF, Design of synchronous and Asynchronous sequential circuits - Shift Registers –Universal Shift Register - Counters.

UNIT III COMPUTER FUNDAMENTALS

9

Functional Units of a Digital Computer: Von Neumann Architecture – Operation and Operands of Computer Hardware Instruction – Instruction Set Architecture (ISA): Memory Location, Address and Operation – Instruction and Instruction Sequencing – Addressing Modes, Encoding of Machine Instruction – Interaction between Assembly and High Level Language.

UNIT IV PROCESSOR

9

Instruction Execution – Building a Data Path – Designing a Control Unit – Hardwired Control, Micro programmed Control – Pipelining – Data Hazard and Control Hazards.

UNIT V MEMORY AND I/O

9

Memory Concepts and Hierarchy – Memory Management – Cache Memories: Mapping and Replacement Techniques – Virtual Memory – DMA – I/O – Accessing I/O: Parallel and Serial Interface – Interrupt I/O – Interconnection Standards: USB.

TOTAL PERIODS: 45

COURSE OUTCOMES:

Upon successful completion of the course, the students will be able to:

CO1: State the fundamentals of computer systems and analyze the execution of an instruction.

CO2: Analyze different types of control design and identify hazards.

CO3: Identify the characteristics of various memory systems and I/O communication.

CO4: Design various combinational digital circuits using logic gates.

CO5: Design various synchronous and asynchronous sequential circuits using Flip Flop.

1 - Low, 2 - Medium, 3 – High, ‘-’- no correlation

SEMESTER-III & IV
B.E-CSE & B. Tech- AI&DS, IT

MA24303, MA24403	DISCRETE MATHEMATICS	L	T	P	C
		3	1	0	4

COURSE OBJECTIVES:

To enable the students

- To extend student's logical and mathematical maturity and ability to deal with abstraction.
- To understand the concepts of Permutations, Combinations and Induction.
- To acquire the knowledge of graph models
- To familiarize the applications of algebraic structures.
- To understand the concepts, significance of lattices and Boolean algebra which are widely used in computer science and engineering.

UNIT I GRAPHS

9+3

Graphs and graph models – Graph terminology and special types of graphs – Matrix representation of graphs and graph isomorphism – Connectivity – Euler and Hamilton paths.

UNIT II LOGIC AND PROOFS

9+3

Propositional Logic – Propositional equivalences - Predicates and Quantifiers – Nested Quantifiers – Rules of inference - Introduction to proofs – Proof methods and strategy.

UNIT III COMBINATORICS

9+3

Mathematical induction – Strong induction and well ordering – The basics of counting – The pigeonhole principle – Permutations and combinations – Recurrence relations – Solving linear recurrence relations – Generating functions – Inclusion and exclusion principle and its applications.

UNIT IV ALGEBRAIC STRUCTURES

9+3

Algebraic systems – Semi groups and monoids - Groups – Subgroups – Homomorphism's – Normal subgroup and cosets – Lagrange's theorem – Definitions and examples of Rings and Fields.

UNIT V LATTICES AND BOOLEAN ALGEBRA

9+3

Partial ordering – Posets – Lattices as posets – Properties of lattices - Lattices as algebraic systems – Sub lattices – Direct product and homomorphism – Some special lattices – Boolean algebra.

TOTAL PERIODS: 60

Course Outcomes:

After completion of this course, the students should be able to

- CO1** : Relate the notion of mathematical thinking, mathematical proofs, and algorithmic thinking, and to apply them in problem solving.
- CO2** : Learn the concepts of combinatorics and its applications in real life problems.
- CO3** : Demonstrate the concepts of graph theory, natural applications of trees and apply the graph colorings concepts in partitioning problems.
- CO4** : Understand the algebraic structures on many levels.
- CO5** : Apply the ideas of lattices and Boolean algebra in solving computer programming Problems.

SEMESTER-III
(B.E - CSE)

CS24303	FOUNDATIONS OF DATA SCIENCE	L	T	P	C
		3	0	2	4

COURSE OBJECTIVES:

To enable the students to

- To understand the data science fundamentals and process.
- To learn to describe the data for the data science process.
- To learn to describe the relationship between data.
- To utilize the Python libraries for Data Wrangling.
- To present and interpret data using visualization libraries in Python

UNIT I INTRODUCTION

9

Data Science: Benefits and uses – facets of data - Data Science Process: Overview – Defining research goals – Retrieving data – Data preparation - Exploratory Data analysis – build the model– presenting findings and building applications - Data Mining - Data Warehousing.

UNIT II DESCRIBING DATA

9

Basic Statistical descriptions of Data - Types of Data - Types of Variables -Describing Data with Tables and Graphs –Describing Data with Averages - Describing Variability - Normal Distributions and Standard (z) Scores

UNIT III DESCRIBING RELATIONSHIPS

9

Correlation – Scatter plots – correlation coefficient for quantitative data – computational formula for correlation coefficient – Regression – regression line – least squares regression line – Standard error of estimate – interpretation of r^2 – multiple regression equations – regression towards the mean

UNIT IV PYTHON LIBRARIES FOR DATA WRANGLING

9

Basics of Numpy arrays – aggregations – computations on arrays – comparisons, masks, boolean logic – fancy indexing – structured arrays – Data manipulation with Pandas – data indexing and selection – operating on data – missing data – Hierarchical indexing – combining datasets – aggregation and grouping – pivot tables

UNIT V DATA VISUALIZATION

9

Importing Matplotlib – Line plots – Scatter plots – visualizing errors – density and contour plots – Histograms – legends – colors – subplots – text and annotation – customization – three dimensional plotting - Geographic Data with Basemap - Visualization with Seaborn- Data Mining with WEKA Tool.

45 PERIODS

PRACTICAL EXERCISES:**30 PERIODS**

1. Download, install and explore the features of NumPy, SciPy, Jupyter, Statsmodels and Pandas packages.
2. Working with Numpy arrays
3. Working with Pandas data frames
4. Reading data from text files, Excel and the web and exploring various commands for doing descriptive analytics on the Iris data set.
5. Use the diabetes data set from UCI and Pima Indians Diabetes data set for performing the following:
 - Univariate analysis: Frequency, Mean, Median, Mode, Variance, Standard Deviation, Skewness and Kurtosis.
 - Bivariate analysis: Linear and logistic regression modeling
 - Multiple Regression analysis
 - Also compare the results of the above analysis for the two data sets.
6. Apply and explore various plotting functions on UCI data sets.
 - Normal curves
 - Density and contour plots
 - Correlation and scatter plots
 - Histograms
 - Three dimensional plotting
7. Visualizing Geographic Data with Basemap.
8. Analyze and classify the Iris data set using WEKA Tool.
9. Apply and explore various plotting functions on Housing data sets.

COURSE OUTCOMES:**At the end of this course, the students will be able to:****CO1:** Define the data science process**CO2:** Understand different types of data description for data science process**CO3:** Gain knowledge on relationships between data**CO4:** Use the Python Libraries for Data Wrangling**CO5:** Apply visualization Libraries in Python to interpret and explore data**TOTAL PERIODS: 75****TEXT BOOKS**

CS24304	OPERATING SYSTEMS	L	T	P	C
		3	0	2	4

COURSE OBJECTIVES:**To enable the students to**

- To understand the basics and functions of operating systems.
- To understand processes and threads
- To analyze scheduling algorithms and process synchronization.
- To understand the concept of deadlocks.
- To analyze various memory management schemes.
- To be familiar with I/O management and file systems.
- To be familiar with the basics of virtual machines and Mobile OS like iOS and Android.

UNIT I INTRODUCTION 9

Computer System -Elements and organization; Operating System Overview - Objectives and Functions - Evolution of Operating System; Operating System Structures – Operating System Services - User Operating System Interface - System Calls – System Programs.

UNIT II PROCESS MANAGEMENT 9

Processes - Process Concept - Process Scheduling - Operations on Processes - Inter-process Communication; CPU Scheduling - Scheduling criteria - Scheduling algorithms: Threads - Multithread Models – Threading issues; Process Synchronization - The Critical-Section problem – Semaphores – Mutex - Monitors; Deadlock - Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery from deadlock.

UNIT III MEMORY MANAGEMENT 9

Main Memory-Swapping- Contiguous Memory Allocation–Paging- Structure of the Page Table-Segmentation, Segmentation with paging; Virtual Memory-Demand Paging–Copy on Write-Page Replacement - Allocation of Frames –Thrashing.

UNIT IV STORAGE MANAGEMENT 9

Mass Storage system – Disk Structure - Disk Scheduling and Management; File-System Interface - File concept - Access methods - Directory Structure - Directory organization - File system mounting- File Sharing and Protection; File System Implementation - File System Structure - Directory implementation - Allocation Methods - Free Space Management; I/O Systems – I/O Hardware, Application I/O interface, Kernel I/O subsystem.

UNIT V VIRTUAL MACHINES AND MOBILE OS 9

Linux System — Design Principles, Kernel Modules, Process Management, Scheduling, Memory

Management - Virtual Machines – History, Benefits and Features, Building Blocks, Types of Virtual Machines and their Implementations- Mobile OS - iOS and Android.

45 PERIODS

LIST OF EXPERIMENTS:

30 PERIODS

1. Installation of windows operating system
2. Illustrate UNIX commands and Shell Programming
3. Process Management using System Calls : Fork, Exit, Getpid, Wait, Close
4. Write C programs to implement the various CPU Scheduling Algorithms
5. Illustrate the inter process communication strategy
6. Implement mutual exclusion by Semaphore
7. Write C programs to avoid Deadlock using Banker's Algorithm
8. Write a C program to Implement Deadlock Detection Algorithm
9. Write C program to implement Threading
10. Implement the paging Technique using C program
11. Write C programs to implement the following Memory Allocation Methods
 - a. First Fit b. Worst Fit c. Best Fit
12. Write C programs to implement the various Page Replacement Algorithms
13. Write C programs to Implement the various File Organization Techniques
14. Implement the following File Allocation Strategies using C programs
 - a. Sequential b. Indexed c. Linked
15. Write C programs for the implementation of various disk scheduling algorithms
16. Install any guest operating system like Linux using VMware

TOTAL PERIODS: 75

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1: Analyze various Scheduling algorithms and process synchronization.

CO2: Explain deadlock prevention and avoidance algorithms.

CO3: Compare and contrast various memory management schemes.

CO4: Explain the functionality of file systems, I/O systems, and Virtualization.

CO5: Compare iOS and Android Operating Systems.

**SEMESTER-III
(B.E - CSE)**

CS24305	DATA STRUCTURES AND ALGORITHMS LABORATORY	L	T	P	C
		0	0	3	2

COURSE OBJECTIVES:

To enable the students to

- Understand fundamental data structures such as arrays, linked lists, stacks, queues, trees, and graphs.
- Implement various linear and non-linear data structures efficiently in memory using C.
- Apply data structures in solving real-world problems through proper algorithmic approaches.
- Analyze the efficiency of different data structure operations in terms of time and space complexity.
- Explore advanced topics like hashing, backtracking, branch and bound, and their applications in problem-solving.

List of experiments:

1. Array implementation of stack and queue
2. Array implementation of list
3. Linked list implementation of list (Single, circular, double)
4. Linked list implementation of stack
5. Linked list implementation of queue
6. Applications of list polynomial
 - a. Addition and subtraction
 - b. Infix to Postfix
- c. Expression evaluation
7. Implementation of binary search Trees
8. Implementation of AVL trees
9. Implementation of heap using priority queues
10. Representation of graph (BFS, DFS)
11. Searching techniques (linear and binary)
12. Sorting techniques (bubble, quick, merge)
13. Implement N Queens problem using Backtracking.
14. Implement of TSP using branch and bound technique.

TOTAL PERIODS: 45

COURSE OUTCOMES:

On completion of the course, the student will be able to

CO1: Implement stack and queue using arrays and linked lists.

CO2: Design and implement linear data structures such as arrays and linked lists including single, circular, and double linked lists.

CO3: Implement non-linear data structures such as trees and graphs.

CO4: Perform graph traversal algorithms like BFS and DFS efficiently.

CO5: Implement hashing concepts, hash tables, and collision resolution strategies.

**SEMESTER-III
(B.E - CSE)**

CS24306	PROGRAMMING IN JAVA LABORATORY	L	T	P	C
		0	0	3	2

COURSE OBJECTIVES:

To enable the students to

- Creation and usage of Java classes, objects, constructors, and variable initialization.
- Explanation of decision-making statements and loop constructs in Java.
- Illustration of core object-oriented concepts like inheritance and polymorphism.
- Explanation of abstraction through abstract classes, methods, and interfaces.
- Introduction to packages and modular programming in Java.

List of experiments:

1. Introduce the java fundamentals, data types, operators in java.
2. Demonstrating creation of java classes, objects, constructors, declaration and initialization of variables.
3. Discuss the various Decision-making statements, loop constructs in java
4. Demonstrate the core object-oriented concept of Inheritance, polymorphism
5. Introduce concepts of method overloading, constructor overloading, overriding
6. Introduce the concept of Abstraction, packages.
7. Introduction to abstract classes, abstract methods, and Interface in java.
8. Working on JDBC with Servlets and JSP.
9. Demonstrate creation of threads using Thread class and runnable interface.
10. Introduce File operations in java.
11. Exception handling in java, introduction to throwable class, throw, throws, finally.

COURSE OUTCOMES:

On completion of the course, the student will be able to

CO1: Understand basic concepts of Java constructs.

CO2: Analyze different forms of inheritance and objects in abstract class.

CO3: Analyze different kind of usage of Exception handling.

CO4: Build web applications using Servlets, JSP, and integrate with databases using JDBC.

CO5: Understand the Multithreading in complex Java programs, and usage of Container classes.

TOTAL PERIODS: 45

**SEMESTER – IV
(B.E-CSE)**

CS24401	DATABASE MANAGEMENT SYSTEMS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

To enable the students to

- To understand DBMS fundamentals, relational models, and Relational Algebra.
- To model databases using ER diagrams and design them using normalization.
- To learn transaction management, concurrency, and recovery concepts.
- To explore internal storage, file organization, and indexing methods.
- To gain basic knowledge of distributed databases, NoSQL, and database security.

UNIT I RELATIONAL DATABASES 9

Introduction and applications of DBMS – Purpose of Database System – Views of data – Database Languages (DDL, DML, DCL, TCL) – Data Models – Database System Architecture – Introduction to relational databases – Relational Model – Keys – Relational Algebra – Advanced SQL features – Embedded SQL– Dynamic SQL

UNIT II DATABASE DESIGN 10

Entity-Relationship model – E-R Diagrams – Enhanced-ER Model – ER-to-Relational Mapping – Functional Dependencies – Non-loss Decomposition – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form – Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form

UNIT III TRANSACTION PROCESSING AND CONCURRENCY CONTROL 8

Transaction Concepts – Transaction State – ACID Properties – Schedules – Serializability – Need for Concurrency – Concurrency control – Two Phase Locking- Timestamp – Validation and Snapshot isolation– Multiple Granularity locking – Deadlock Handling – Recovery Concepts – Recovery based on deferred and immediate update – Shadow paging

UNIT IV IMPLEMENTATION TECHNIQUES 9

RAID – File Organization – Organization of Records in Files – Data dictionary Storage – Column Oriented Storage– Indexing and Hashing – Ordered Indices – B tree Index Files – B+ tree Index Files – Static Hashing – Dynamic Hashing – Query Processing Overview – Algorithms for Selection, Sorting and join operations – Query optimization using Heuristics - Cost Estimation.

UNIT V ADVANCED TOPICS 9

Distributed Databases: Architecture, Data Storage, Transaction Processing, Query processing and optimization – NOSQL Databases: Introduction – CAP Theorem – Document Based systems

– Key value Stores – Column Based Systems – Graph Databases. Database Security: Security issues – Access control based on privileges – Role Based access control – – SQL Injection.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to

CO1: Construct SQL Queries using relational algebra.

CO2: Design database using ER model and normalize the database

CO3: Construct queries to handle transaction processing and maintain consistency of the Database.

CO4: Compare and contrast various indexing strategies and apply the knowledge to tune the performance of the database.

CO5: Appraise how advanced databases differ from Relational Databases and find a suitable database for the given requirement.

TOTAL PERIODS: 45

TEXT BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, “Database System Concepts”, Seventh Edition, McGraw Hill, 2021.

2. Ramez Elmasri, Shamkant B. Navathe, “Fundamentals of Database Systems”, Seventh Edition, Pearson Education, 2017

SEMESTER-IV
B. Tech – AI&DS, IT, B.E –CSE

GE24401	ENVIRONMENTAL SCIENCE AND ENGINEERING	L	T	P	C
		2	0	0	2

COURSE OBJECTIVES:

To enable the students to

- To introduce ecological concepts and biodiversity, emphasizing conservation and public awareness.
- To understand pollution types, impacts, and waste management practices, with industrial safety focus.
- To expose students to various renewable energy technologies and their practical applications.
- To study how people harm the environment and learn ways to prevent and manage disasters.
- To promote sustainability awareness and application of sustainable practices in industry and society.

UNIT I ENVIRONMENT AND BIODIVERSITY

6

Definition, scope, and importance of environment; need for public awareness. Ecosystem and energy flow with ecological succession. Types and values of biodiversity; India as a mega-diversity nation and biodiversity hotspots. Threats like habitat loss, poaching, man-wildlife conflict, Endangered and endemic species of India and conservation methods (in-situ and ex-situ), Role of information technology in species monitoring.

UNIT II ENVIRONMENTAL POLLUTION

6

Causes, Effects and Preventive measures of water, air, soil, noise, and radioactive pollution. Waste management covers municipal solid waste, hazardous waste, and E-Waste - gold extraction. Carbon Credit and Footprint concepts related to industry. Environmental protection acts. Case studies on OHASMS (Occupational health and safety management systems) focusing on IT-based safety monitoring and digital compliance systems.

UNIT III RENEWABLE SOURCES OF ENERGY

6

Energy management and conservation, New Energy Sources: Need of new sources. Different types new energy sources. Applications of- Hydrogen energy, Ocean energy resources, Tidal energy conversion. Concept, origin and power plants of geothermal energy. Case studies on Hydrogen Fuel Production Modeling.

UNIT IV HUMAN POPULATION AND ENVIRONMENT IMPACT

6

Human population growth and its effect on resources. Importance of value education and human rights. Land degradation and deforestation. Man-made disasters: industrial accidents, nuclear incidents, and oil spills – prediction and management. Carbon sequestration and ozone depletion. Role of individual responsibility in environmental protection.

UNIT V SUSTAINABILITY MANAGEMENT AND PRACTICES

6

Sustainability Management - Development, GDP, Sustainability- concept, needs and challenges-economic, social and aspects of sustainability and protocols Sustainable Development Goals-targets. Sustainability Practices - Zero waste and R concept, Circular economy, ISO 14000 Series, Environmental Impact Assessment. Sustainable habitat: green buildings, green materials, energy efficiency, sustainable transports. Sustainable energy. Case studies on smart electric vehicle (EV) charging networks.

TOTAL PERIODS: 30

COURSE OUTCOMES:

After completion of this course, the students should be able to

- CO1** : Explore ecosystem functions, biodiversity, and the importance of species protection.
- CO2** : Identify types of pollution, their effects, and preventive measures including waste management.
- CO3** : Describe renewable energy sources and their applications in sustainable energy production.
- CO4** : Analyze human impact on the environment and propose disaster management strategies.
- CO5** : Apply sustainability concepts and practices in environmental and industrial systems.

SEMESTER- III / IV
B.E-CSE & B. Tech- AI&DS, IT

MA24305, MA24401	PROBABILITY AND STATISTICS	L	T	P	C
		3	1	0	4

COURSE OBJECTIVES:

- Understand the basic concepts of probability with characteristics and also two-dimensional random variables
- Learn how to formulate and test hypotheses about means, variances and proportions and to draw conclusions based on the results of statistical tests.
- Apply the concepts of probability and statistics in the field of Artificial Intelligence and Data Science.

UNIT I PROBABILITY AND RANDOM VARIABLES 9 + 3

Axioms of probability - Conditional probability - Total probability - Bayes theorem - Random variables - Probability mass function - Probability density functions - Properties.

UNIT II STANDARD DISTRIBUTIONS 9 + 3

Discrete distributions: Binomial - Poisson - Geometric - Continuous distributions: Uniform - Exponential - Normal distributions and their properties.

UNIT III TWO- DIMENSIONAL RANDOM VARIABLES 9 + 3

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linear regression – Transformation of random variables – Central limit theorem (for independent and identically distributed random variables).

UNIT IV NON-PARAMETRIC TESTS 9 + 3

Introduction - The Sign test - The Signed - Rank test - Rank - sum tests – Mann-Whitney U test - The H test - Tests based on Runs - Test of randomness - The Kolmogorov Tests.

UNIT V STATISTICAL QUALITY CONTROL 9 + 3

Control charts for variables ($\bar{X}$ and R charts) – Control charts for attributes (p, c, u and np charts) – Process capability Studies -Tolerance limits - Acceptance sampling.

TOTAL PERIODS: 60

COURSE OUTCOMES:

After completion of this course, the students should be able to

- CO1** : Demonstrate and apply the basic probability axioms and concepts in their core areas of random phenomena.
- CO2** : Apply the concepts of probability distributions in an appropriate place of science and Engineering
- CO3** : Execute the knowledge of solving two-dimensional random variables using correlation techniques

CO4 : Understand the basic concepts of classifications of design of experiments in the field of statistical quality control.

CO5 : Summarize the measurements and procedure for statistical charts.

**SEMESTER – IV
(B.E-CSE)**

CS24402	CRYPTOGRAPHY AND NETWORK SECURITY	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

To enable the students to

- Study the assessment of the security offered by built-in cryptosystems.
- Acquire expertise in the fundamental mathematical concepts related to security.
- Design cryptographic algorithms to safeguard information security.
- Develop knowledge of various certified methods for data integrity and authentication.
- Familiarize yourself about cybercrimes and the realm of cyber security

UNIT I INTRODUCTION TO SECURITY 10

Computer Security Concepts – The OSI Security Architecture – Security Attacks – Security Services and Mechanisms – A Model for Network Security – Classical encryption techniques: Substitution techniques, Transposition techniques, Steganography – Foundations of modern cryptography: Perfect security – Information Theory – Product Cryptosystem – Cryptanalysis.

UNIT II SYMMETRIC CIPHERS 9

Number theory – Algebraic Structures – Group, Rings, Fields, Finite Fields –SYMMETRIC KEY CIPHERS: SDES – Block Ciphers – DES, Strength of DES – Block cipher design principles – Block cipher mode of operation – Evaluation criteria for AES – Pseudorandom Number Generators – RC4.

UNIT III MATHEMATICS OF ASYMMETRIC KEY CRYPTOGRAPHY 9

Primes – Primality Testing – Factorization – Euler’s totient function, Fermat’s and Euler’s Theorem - Modular Arithmetic- Euclid ‘s algorithm – Congruence and matrices – Chinese Remainder Theorem – Exponentiation and logarithm ASYMMETRIC KEY CIPHERS: RSA cryptosystem – Diffie Hellman key exchange - Elliptic curve arithmetic – Elliptic curve cryptography.

UNIT IV INTEGRITY AND AUTHENTICATION ALGORITHMS 9

Authentication requirement – Authentication function – MAC – Hash function – Security of hash function: HMAC, CMAC – SHA – Digital signature and authentication protocols – DSS – Schnorr Digital Signature Scheme – ElGamal cryptosystem – Authentication applications – Kerberos MUTUAL TRUST: Key management and distribution – Symmetric key distribution using symmetric and asymmetric encryption – Distribution of public keys – X.509 Certificates. 98

UNIT V SYSTEM SECURITY 8

Intruders – Malicious software – viruses – Firewalls, Electronic Mail security – PGP, S/MIME – IP security – Web Security - Cyber Crime and Information Security – Network Access control

TOTAL PERIODS: 45

COURSE OUTCOMES:

On completion of the course, the student will be able to

CO1: Understand the fundamentals of networks security, security architecture, threats and vulnerabilities

CO2: Apply the different cryptographic operations of symmetric cryptographic algorithms

CO3: Apply the different cryptographic operations of public key cryptography

CO4: Apply the various Authentication schemes to simulate different applications.

CO5: Understand various Network Access control security.

SEMESTER – IV

(B.E-CSE)

CS24403	AUTOMATA THEORY AND COMPILER DESIGN	L	T	P	C
		3	0	2	4

COURSE OBJECTIVES:

To enable the students to

- To study the foundations of computation (including automata theory) and build models of regular expressions and languages.
- To design context-free grammars and pushdown automata, and to analyze Turing machines and their computational power.
- To learn the various phases of compiler and to utilize the knowledge of patterns and tokens for developing a Lexical and Syntax analyzer.
- To build Syntax Directed Translation Schemes to map syntactic structures to semantic actions.
- To learn to implement code generation and code optimization.

UNIT I AUTOMATA AND REGULAR EXPRESSIONS 11

Introduction to Automata Theory : Finite Automata (FA) – Deterministic Finite Automata (DFA) – Non-deterministic Finite Automata (NFA) – Conversion of NFA into DFA - Equivalence of DFA & NFAs with and without ϵ -moves- – Minimization of DFAs. **Regular expression** – Regular Languages- Closure properties of regular languages- Equivalence of Finite Automata and regular expressions – Proving languages to be not regular (Pumping Lemma)

UNIT II CFG, PDA AND TURING MACHINES 10

Context-Free Grammar (CFG) and Languages – Ambiguity in grammars and languages– Simplification of CFG- Chomsky Normal Form (CNF) and Greibach Normal Form (GNF)- **Push Down Automata (PDA):** Definition – Moves - Equivalence of pushdown automata and CFG- PDA **Turing Machine** : Universal Turing machine- PCP-MPCP.

UNIT III LEXICAL ANALYSIS AND SYNTAX ANALYSIS 9

Introduction to Compiler Design: Translators- Compilation and Interpretation- Language processors -The Phases of Compiler – **Lexical Analyser:** Input Buffering -Tokens - Language for Specifying Lexical Analyzers – Lex tool -**Syntax Analyser:** Parser- Top-Down, Bottom Up - Recursive Descent Parser Predictive Parser-LL(1) - Parser-Shift Reduce Parser-LR Parser- LR (0)Item Construction of SLR Parsing Table - LALR Parser - Error Handling and Recovery in Syntax Analyzer- YACC tool

UNIT IV SEMANTIC ANALYSIS 7

SDT – SDD - Construction of Syntax Tree-Bottom-up Evaluation of S-Attribute Definitions- Design of predictive translator – Type Systems - Type Checking, Type Expressions - Type Conversions - Three Address Code.

Back patching- Issues in the Design of a code generator - Design of a simple Code Generator – Code optimization: Peephole Optimization, Dynamic Programming Code Generation, Target code Generation

45 PERIODS

LIST OF EXPERIMENTS:

30 PERIODS

1. Design a Finite State Machine(FSM) that accepts below conditions
 - a. That accepts all strings over input symbols {0,1} having three consecutive 1's as a substring.
 - b. That accepts all strings over input symbols {0,1} which are divisible by 3.
 - c. That accepts all decimal string which are divisible by 3.
2. Design a Push Down Automata (PDA) that accepts all string having equal number of 0's and 1's over input symbol {0, 1} for a language 0^n1^n where $n \geq 1$.
3. Design a Turing Machine that calculate 2's complement of given binary string.
4. Using the LEX tool, Develop a lexical analyzer to recognize a few patterns in C. (Ex. identifiers, constants, comments, operators etc.). Create a symbol table, while recognizing identifiers.
5. Implement a Lexical Analyzer using LEX Tool
6. Generate YACC specification for a few syntactic categories.
 - a. Program to recognize a valid arithmetic expression that uses operator +, -, * and /.
 - b. Program to recognize a valid variable which starts with a letter followed by any number of letters or digits.
 - c. Program to recognize a valid control structures syntax of C language (For loop, while loop, if-else, if-else-if, switch-case, etc.).
 - d. Implementation of calculator using LEX and YACC
7. Generate three address code for a simple program using LEX and YACC.
8. Implement type checking using Lex and Yacc.
9. Implement simple code optimization techniques (Constant folding, Strength reduction and Algebraic transformation)
10. Implement back-end of the compiler for which the three address code is given as input and the 8086 assembly language code is produced as output.

TOTAL PERIODS: 75

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1: Construct automata theory using Finite Automata and Regular Expressions

CO2: Design context free grammar, Pushdown Automata and Turing Machine

CO3: Utilize the knowledge of patterns and tokens for developing a Lexical and Syntax analyzer.

CO4: Understand semantics rules (SDT) Schemes to map syntactic structures to semantic actions.

CO5: Implement code generation and apply code optimization techniques.

1 - Low, 2 - Medium, 3 – High ‘-’- no correlation

SEMESTER – IV
(B.E-CSE)

CS24404	COMPUTER NETWORKS	L	T	P	C
		3	0	2	4

COURSE OBJECTIVES:

To enable the students to

- To understand the concepts of layering in networks.
- To know the functions of protocols of each layer of TCP/IP protocol suite.
- To visualize the end-to-end flow of information.
- To learn the functions of network layer, transport layer and the various routing protocols
- To familiarize with network security and various new emerging trends.

UNIT I INTRODUCTION 9

Data Communication - Networks & Topologies -Network Types – Protocol Layering – TCP/IP Protocol suite – OSI Model – Introduction to Sockets – - Physical Layer: Data and Signals - Performance – Transmission media.

UNIT II DATA LINK LAYER 9

Data Link Layer – Framing – Flow control – Error control – Data-Link Layer Protocols – HDLC – PPP - Media Access Control – Ethernet Basics – CSMA/CD – Virtual LAN – Wireless LAN (802.11) - Switching: Packet Switching- Circuit Switching

UNIT III NETWORK LAYER 9

Internet protocol - IPV4 – IP Addressing – Subnetting - IPV6, ARP, RARP, ICMP, DHCP - Routing and protocols: Unicast routing - Distance Vector Routing - RIP - Link State Routing – OSPF – Path-vector routing - BGP - Multicast Routing: DVMRP – PIM.

UNIT IV	TRANSPORT AND APPLICATION LAYER	10
----------------	--	-----------

Overview of transport layer - Transport-Layer Protocols: UDP – TCP: Connection Management – Flow control - Congestion Control - Congestion avoidance (DEC bit, RED) – SCTP – Application Layer protocols: HTTP – FTP – Email protocols (SMTP - POP3 - IMAP - MIME) – DNS.

UNIT V NETWORK SECURITY AND EMERGING TECHNOLOGIES 8

Network Security Technologies: Intrusion detection systems- Firewalls- VPN-Blockchain
Technology in Networking: Basics of blockchain-Applications in networking- Zero Trust
Networking: Concepts and implementation strategies.

45 PERIODS

PRACTICAL EXERCISES: 30 PERIODS

1. Learn to use commands like tcpdump, netstat, ipconfig, nslookup and traceroute. Capture ping and trace route PDUs using a network protocol analyzer and examine.
2. Simulation of an error correction code (like CRC)
3. Write a code simulating ARP /RARP protocols.

4. Applications using TCP sockets like: a) Echo client and echo server b) Chat
5. Simulation of DNS using UDP sockets.
6. Simulation of Distance Vector/ Link State Routing algorithm.
7. Write a HTTP web client program to download a web page using TCP sockets.
8. Use a tool like Wireshark to capture packets and examine the packets.
9. Study of Network simulator and Simulation of Congestion Control Algorithms using NS.
10. Study of TCP/UDP performance using Simulation tool.

COURSE OUTCOMES:

Upon successful completion of this course, students will be able to:

CO1: Explain the basic layers and its functions in computer networks.

CO2: Understand the basics of how data flows from one node to another.

CO3: Analyze routing algorithms.

CO4: Describe protocols for various functions of network layer, transport layer and the various routing protocols.

CO5: Understand network security and various new emerging trends.

TOTAL PERIODS: 75

SEMESTER – IV
(B.E-CSE)

CS24405	DATABASE MANAGEMENT SYSTEMS LABORATORY	L	T	P	C
		0	0	3	2

COURSE OBJECTIVES:

To enable the students to

- To learn and implement important commands in SQL.
- To learn the usage of nested and joint queries.
- To understand functions, procedures and procedural extensions of databases.
- To implement PL/SQL programs for processing multiple SQL statements.
- To be familiar with the use of a front end tool for GUI based application development.

EXPERIMENTS:

1. Create a database table, add constraints to execute DDL, DML, DCL and TCL Commands.
2. Create a set of tables, add foreign key constraints and incorporate referential integrity.
3. Execute a single line and group (Aggregate) functions on Relation.
4. Query the database tables and Execute Set operations on various Relations.
5. Query the database tables and explore Groupby, Orderby clause on Relations.
6. Write user defined functions and stored procedures in SQL.
7. Query the database tables and explore natural, equi and outer joins.
8. Write SQL Triggers for insert, delete, and update operations in a database table.
9. Create View and index for database tables with a large number of records.
10. Write a PL/SQL block for transaction operations of a typical application using triggers.
11. Case Study using any of the real life database applications from the following list
 - a) Inventory Management for a EMart Grocery Shop
 - b) Society Financial Management
 - c) Cop Friendly App – Eseva
 - d) Property Management – eMall
 - e) Star Small and Medium Banking and Finance
 - Build Entity Model diagram. The diagram should align with the business and functional goals stated in the application.
 - Apply Normalization rules in designing the tables in scope.
 - Prepared applicable views, triggers (for auditing purposes), and functions for enabling enterprise grade features.

TOTAL PERIODS: 45

COURSE OUTCOMES:

At the end of this course, the students will be able to:

CO1: Create databases with different types of key constraints.

CO2: Formulate simple and complex SQL queries using DML and DCL commands.

CO3: Create views on relational database based on the requirements of users.

CO4: Implement PL/SQL programs for processing multiple SQL statements.

CO5: Use advanced features such as stored procedures and triggers and incorporate in GUI based application development.
